

AGILA

CATalog App Manual
Animal Management Department
AGILA 2026

PREFACE

This is a guide to using the AGILA CATalog app, written for the people who use it every day. You do **not** need to know anything technical to use this manual.

Roles

The app has three kinds of users. Each one can do everything the one before it can, **plus more**:

Role	What they do	Where to read
Volunteer	Go out, count cats, log them in census sessions	Part 1
Manager	All of the above, plus review and approve what volunteers submit, and manage the cat database	Part 2
Administrator	All of the above, plus manage people, regions, and the Google Sheets connection	Part 3

Each Part is **self-contained** — it repeats what the roles before it cover. If you are a volunteer, you only ever need Part 1. If you are an administrator, Part 3 has everything.

Developers only: setup, deployment, and how the Google Sheets sync works under the hood live in this GitHub repo: <https://github.com/legnspice/agila-app> (see docs/gsheets-sync-setup-guide.md). Nothing in this manual requires a developer, a terminal, or code.

The Idea Behind The App

The **app is the primary, authoritative place to manage cats in Ateneo**. The Google Sheets that AGILA's Animal Management Department (originally) uses are kept in **two-way sync** with the app:

- **The app updates the sheet.** Anything you add or change in the app appears in the matching Google Sheet automatically, every few minutes.
- **The sheet can update the app.** Edits made directly in the sheet (by someone with edit access) flow *back* into the app on the next sync. If the same cat was changed in both places, the **most recent edit wins**.

So the sheet is a **live mirror you can also write to**.

The guidance for everyone is still simple: do your work in the app.

- The app is the intended, safest way to add and edit cats. It checks your input and keeps everything consistent.
- Editing the spreadsheet directly is a **manager fallback** for emergencies (see Part 2) — not the normal workflow.
- **Volunteers** are given **view-only** access to the sheet, so for them it's just for looking — all their work happens in the app anyway.

If you remember one thing: **the app is the authority; the sheet stays in step with it both ways, but routine work belongs in the app.**

Definition of Terms

Term	What it means
Cat / entry	One cat's record — its photo, details, health, and location.
Census	A count of the cats in an area at a point in time.
Session	One trip out to count cats in one location. Has a Census No. and a list of cats you logged.
Census No.	The automatic number given to each session, so they can be referred to in order.
Region / Location	A named zone on campus (e.g. <i>GATE 3</i> , <i>ARETE</i>). Every cat and every session belongs to one.
TNVR	Trap– Neuter– Vaccinate– Return — the program for humanely managing the cat population.
Sociability	How comfortable a cat is around people: <i>Domesticated</i> , <i>Tame</i> , or <i>Feral</i> .
Submitted / Unfinished	A session you've sent for review is <i>Submitted</i> ; one you're still working on is <i>Unfinished</i> .
Review / Merge	When a manager checks a submitted session and combines duplicate sightings of the same cat.
Sync	The automatic background process that keeps the app and the Google Sheets matching — in both directions, every few minutes.
Catalog	The public-facing list of cats (including which ones are adoptable).

PART 1 - VOLUNTEER

As a volunteer, your job is the **census**: go to a location, find the cats, and log each one in the app. Everything you need is in the **Sessions** tab.

1.1 Getting in

1. Go to <https://ateneanagila.vercel.app/>
2. Click Log In in the homepage's navigation bar.
3. Tap **Sign in with Google**.
4. Choose your account.

You must be **invited first** — an administrator adds your email to the app before you can sign in. If you sign in and see a message that you're *not onboarded*, your email hasn't been added yet. Ask an administrator to add you (see Part 3).

Figure 1: Sign-In Screen

1.2 What you can see

You can then proceed onto the dashboard. As a volunteer you have four tabs:

- **Overview** — an overall statistics dashboard: breaks down population into categories
- **TNVR** — a specific statistics dashboard: how much of the cat population has been neutered/spayed (the **TNVR Score**), with a breakdown by sex, shown for all locations or one at a time.
- **Database** — every cat's full record. You can **look but not change** — the detail screens are read-only for volunteers.
- **Sessions** — your main workspace. This is where you run a census.

1.3 Starting a census session

1. Go to the **Sessions** tab.
2. Tap **Create New**.
3. Choose the **Location** (region) you're counting.
4. The app creates the session and gives it a **Census No.** You can now add cats.

Figure 2: Sessions Tab

You don't have to finish in one sitting. A session you haven't submitted shows as **Unfinished** in your Sessions list with a **Continue** button — tap it to pick up where you left off.

1.4 Adding a cat to the session

1. Inside the session, tap the **+** button (the orange circle, bottom-right on mobile, or **Add entry** on desktop).
2. The **Add Entry** form opens. Fill in what you can — **every field is optional except a location**, and the location is already set from the session.

Figure 3: *Add Entry Form*

The photo (top of the form):

- Tap **Take photo** to use your camera, or **Choose file** to pick an existing picture.
- After picking, you can **drag the photo to reposition it** so the cat is centred.
- **Retake**, **File**, or **Remove** let you change your mind.

The details (scroll through form):

FIELD	NOTES
Name	Optional — a nickname if the cat has one.
Color	The cat's coat (e.g. <i>Calico</i> , <i>Orange Tabby</i>). Leave as <i>Unknown</i> if unsure.

CATALOG APP MANUAL
Animal Management Department
AGILA 2026

Size / Age	<i>Neonatal, Kitten, Juvenile, or Adult .</i>
Sex	<i>Male or Female .</i>
Sociability	<i>Domesticated, Tame, or Feral .</i>
Condition	<i>Healthy, Sick, Injured , or Sick and Injured .</i>
Neutered	<i>Yes, No, or Unknown .</i>
Spot Last Seen	Where exactly you saw it.
Caretaker	The person who feeds/looks after it, if known.
Notes	Anything else worth recording.

3. Tap **Save**. The cat now appears as a card in the session.

If the photo fails to upload: you'll see a message that the cat was saved but the photo didn't. The cat's details are safe. Tap **Retry Photo** to try again, or **Skip Photo** to finish without it (you can add a photo later by editing the cat).

1.5 Editing or removing a cat in the session

- **To edit:** tap the cat's card. The same form opens with its details — change what you need and press **Save**.
- **To remove:** tap the **trash icon** on the card. This takes the cat out of this session.

The screenshot shows the 'Edit Entry' form. At the top is a title bar with 'Edit Entry' and a close button. Below is a 'Photo' section with a cat image and buttons for 'Take', 'File', and 'Remove'. Below that is a 'Name (optional)' text input field containing 'TEST CAT'. At the bottom are 'Cancel' and 'Save' buttons.

Figure 4: *Edit Entry Form*

1.6 Finishing the session

When you've logged every cat:

1. Tap **Finish** (mobile) or **Submit** (desktop).
2. Confirm.

The session is now **Submitted** and goes to a manager to review. You generally don't need to touch it after this — if something needs fixing, a manager handles it during review.

Animal Management Department
AGILA 2026

Figure 5: *Finish Session Confirmation*

To discard a session instead (e.g. you started it by mistake): tap the **trash icon** near the Census No. and confirm. This deletes the unfinished session.

1.7 Quick reference

- Count cats → **Sessions** → **Create New** → **pick location**.
- Add a cat → **+ / Add entry** → **fill the form** → **Save**.
- Photo trouble → the cat is still saved; **Retry** or **Skip**.
- Done → **Finish / Submit** (it goes to a manager).
- Started by mistake → **trash icon** → **discard**.
- You can always press **Continue** an unfinished session later.

PART 2 - MANAGER

As a manager you can do everything a volunteer can, **plus** you review and approve what volunteers submit, and you have full control of the cat database. You're the quality gate: volunteers gather the data, you make it official.

2.1 Everything a volunteer can do

A quick recap, so this Part stands on its own:

- **Sign in** with Google (you must have been invited by an administrator).
- **Run a census session:** **Sessions** → **Create New** → **pick a location**, then **+ / Add entry** to log each cat (photo, name, color, age, sex, sociability, condition, neutered, spot last seen, caretaker, notes) → **Save**. Tap a card to edit, the trash icon to remove. **Finish / Submit** when done; **Continue** an unfinished one later.
- **View** the overview dashboard, the TNVR statistics, the cat database, and the public catalog.

Everything in Part 1, sections 1.3–1.6, applies to you too. The rest of this Part is what's *new* for managers.

2.2 Reviewing submitted sessions

When volunteers submit sessions, the cats they logged wait for your review.

1. Go to **Sessions** and tap **Review Sessions**.
2. You'll see the **For Review** list — every cat awaiting review, with a count of how many are pending.

CATALOG APP MANUAL
Animal Management Department
AGILA 2026

Figure 6: *Sessions Manager View*

For each cat you have two choices:

- **Quick approve** — tap the ✓ (**check**) button. Confirm, and the cat is accepted as-is and added to the official database. Use this when the entry is clearly correct and not a duplicate.
- **Full review** — tap the ✎ (**pencil**) / **Review** button to open the two-step review:

CATALOG APP MANUAL

Animal Management Department
AGILA 2026

Step 1 — Info Validation. Correct any details the volunteer got wrong (color, age, sex, sociability, status, caretaker, notes, location). The **Region (override)** field lets you firmly assign the cat to a location.

- **Approve Instantly** ("New cat, Approve") — accept it as a brand-new cat.
- **Discard** — delete the entry entirely (use for junk/mistaken entries).
- **Next >** — save your corrections and move to Step 2.

The screenshot shows the 'TEST CAT' entry in the CATALOG app. At the top, there's a header with the 'CATALOG' logo and a user profile icon. Below the header, the title 'TEST CAT' is displayed with a back arrow and the text 'LAST UPDATED 06/06/26'. Two orange buttons are present: 'Discard X' and 'Approve Instantly ✓'. The main section is titled 'Info Validation' with a 'Next >' button. The form fields are as follows:

- Last seen at:** 06/06/26 / — (with a location tag 'ARETE')
- Name:** TEST CAT
- Color:** Orange and White Tabby (dropdown menu)
- Size/Age:** Adult (dropdown menu)

The bottom navigation bar includes icons for Overview, TNVR, Database, and Sessions.

Figure 7: Info Validation Screen

CATALOG APP MANUAL

Animal Management Department
AGILA 2026

Step 2 — Cross-Reference (check for duplicates). The app shows existing cats (by default, those in the same location) so you can tell whether this is a cat you already have on record. - If it **matches an existing cat**, tap **Merge** > on that cat. A dialog shows the fields that differ — pick the correct value for each (matching fields merge automatically). Confirm, and the new sighting is folded into the existing record. - If it's **genuinely new**, tap **New cat, Approve**. - **Discard** removes it.

Figure 8: Cross-Reference Screen

Once approved or merged, the cat leaves the review queue.

2.3 The cat database — full control

Open the **Database** tab. Unlike volunteers (who can only look), you can add, edit, and delete cats.

- **Add a cat directly:** tap **Add entry** (the +). This opens the same entry form, outside of any session — useful for adding a cat you already know about.
- **Delete a cat:** tap the **trash icon** on its card and confirm. This permanently removes it.
- **Open a cat** to see three tabs:
- **General** — identity and details: color, age, sex, sociability, status, **Region (override)**, caretaker, spot last seen, notes. You can also **change the photo** and flip the **Adoptable** switch (which controls whether it shows in the public Catalog as adoptable). Edit, then **Save changes** (or **Cancel**).
- **Medical** — **condition**, **neutered** (Yes/No/Unknown), **neuter date**, and **vaccination date**. Edit and **Save changes**.
- **Interventions** — the cat's TNVR and veterinarian actions. Tap **New Intervention** to add one, and set each one's status (**Pending** → **Finished**, or **Cancelled**).

Figure 9: Editable Cat Entry on Database

The **Sheets** button on the Database screen opens the related Google Sheet in a new tab for reference.

2.4 Census Report

The **Census Report** button (on the Sessions screen) opens the census report document in a new browser tab — the shared write-up used for reporting outside the app.

2.5 Editing the spreadsheet directly (emergency fallback)

You — unlike volunteers — keep **edit access** to the Google Sheets. Because the sync is **two-way**, anything you change in the sheet flows back into the app on the next sync (every few minutes), and if the same cat changed in both places, the **most recent edit wins**.

Use this sparingly. The app is the safe, intended place to make changes — it validates your input and avoids conflicts. Edit the sheet directly only when the app isn't usable and something genuinely can't wait. A few cautions:

- Don't change the format of the GSheets now.
- Don't touch the hidden/locked columns (they're protected for a reason).
- Don't clear/delete rows/sheets (do cat deletions on app).
- A value the app wouldn't accept (a misspelled status, an invalid date) may be **rejected** when it syncs back — so stick to the same options the app offers.
- When the app is available again, go back to working in it.
- To replace a photo in the GSheets, delete the formula first in the photo column first, then insert your image so it gets tracked accordingly.

PART 3 - ADMIN

As an administrator you can do everything a manager can, **plus** you manage the people, the locations, and the Google Sheets connection. You're the only role that sees the **Admin** tab.

3.1 Everything a manager (and volunteer) can do

A quick recap, so this Part stands on its own:

- **Run and review census sessions** — create sessions and log cats (Part 1), and review, approve, merge, or discard what volunteers submit (Part 2, section 2.2).
- **Manage the cat database** — add, edit, and delete cats across the General, Medical, and Interventions tabs; toggle Adoptable; change photos (Part 2, section 2.3).
- **View** the Overview dashboard and TNVR statistics, open the **Census Report**, and (in a pinch) make emergency edits to the spreadsheet (Part 2, section 2.5).

The rest of this Part is what's *new* for administrators: the **Admin** tab, which has three sections — **Users & Access**, **Regions**, and **GSheet Config**.

Figure 10: Admin Tab

3.2 Users & Access — managing people

This is how someone gets into the app at all: **you invite them here first.**

To add a person:

1. Tap **Add Entry**.
2. Enter their **email** (the Google account they'll sign in with), an optional **name**, and their **role** (Volunteer, Manager, or Administrator).
3. Save. They can now **Sign in with Google** using that email.

To change someone's role: use the **role dropdown** on their row and pick the new role. The change takes effect immediately.

To remove someone: tap the **trash icon** on their row. They'll no longer be able to use the app.

Figure 11: Admin Tab Users & Access Section

The three roles, in short:

Role	Can do
Volunteer	Run census sessions; view-only everywhere else.
Manager	All of the above + review/approve, full database control, census report.
Administrator	All of the above + this Admin tab.

3.3 Regions — managing locations

A **region** is a named campus location (e.g. *GATE 3*, *ARETE*). Every cat and session belongs to one. Adding a region here also sets up its Google Sheet automatically — no developer needed.

- **Add a region:** tap **Add Region**, type the **name**, pick a **color**, and confirm.
- **Rename a region:** tap the **pencil**, edit the name, and **Save**. (Its sheet is renamed to match, so syncing keeps working.)
- **Delete a region:** tap the **trash icon**. If the region still has cats or sessions, you'll be asked to **type its name to confirm** — deleting it also removes the cats that belong *only* to that region. Empty regions delete without the extra step.

Figure : Admin Tab Regions Section

⚠ Never create a region by adding a tab directly in the Google Sheet. Always add regions here in the app — that's the only way the sheet gets set up correctly.

3.4 GSheet Config — the sync, and how to recover it

This section controls the connection between the app and the Google Sheets. Most of the time you'll never touch it — but if the sync ever stops, this is where you fix it.

CATALOG APP MANUAL

Animal Management Department
AGILA 2026

Figure : Admin Tab GSheet Config Section

Sync status — and "the sync is Frozen"

The top of this section shows whether the sync is **Active** (green) or **Frozen** (red, with a reason).

What "Frozen" means: if a sync ever fails, the app **automatically freezes** the sync to avoid making things worse, and sends an alert (to a Discord channel). While frozen, the app and the sheets stop updating each other.

How to recover — the most important procedure in this manual:

1. **Read the reason** shown next to the Frozen badge (and the Discord alert). It usually points at the cause — often a bad value someone typed into a sheet.
2. **Fix the cause** — correct the offending cell in the sheet, or the data in the app.
3. Tap **Unfreeze**. This runs a full re-sync from the sheets and then resumes normal syncing.
4. The status should return to **Active**.

If you're not sure what the reason means or the freeze comes straight back, this is the one situation to **ask a developer** — point them at [./gsheets-sync-setup-guide.md](https://github.com/AGILA/AGILA/blob/main/gsheets-sync-setup-guide.md).

Provision region sheets

Provision Sheets re-applies the correct structure to every region's sheet (headers, protected columns, and the list of regions). It's **safe to run any time** — use it if a sheet's layout looks wrong or after fixing something manually. It does **not** change any cat data.

Seed missing UUIDs

The **Seed UUIDs** button gives a permanent hidden ID to old sheet rows that don't have one yet, so they can be imported. This is essentially a **one-time, first-setup** action — after go-live, new rows get their ID automatically, and you should never need this again. Because it's identity-related, it asks you to confirm before running.

Provision and Seed are deliberately separate buttons: Provision is safe structural repair; Seed touches cat identity and is a once-at-setup step. When in doubt, only use **Provision**.

Reclaim orphaned photos

Over time, deleting cats and merging duplicates can leave behind photo files in storage that no cat record uses anymore. ****Reclaim orphaned photos**** finds and deletes those leftover files, freeing up storage. It is ****safe**** — it only removes a photo that ****no**** cat points to, so a photo still shown anywhere in the app is never touched. It doesn't change any cat data. Because it deletes files, it asks you to confirm first, then reports how many it cleaned up.

Run it occasionally for housekeeping — say, after a big round of deletions or merges. There's no harm in running it when there's nothing to clean (it'll just report "no orphans found").
